
Subject: IDL Objects?

Hello -

It's been a very long time since I've used IDL (10 years). I'm curious as to whether:

- o Any object-based, or object-oriented features have been built into the language since that time.
- o If not, I wonder if people who program in IDL do any 'objects by convention' using the facilities that are in the languages (e.g. in C one can build up an object system, as in Xt, by judicious use of macros and opaque structures, etc).

Thanks!

Brian
