
Subject: Problem: !D.Y_SIZE in PS portrait

Hi,

I want to use the system variable !P.MULTI to plot multiple contour plot on a page.

Using set_plot='PS' in landscape mode I haven't problems, but in the portrait mode only the lower part of page is used by IDL.

The !D.X_SIZE is correct (17780) but !D.Y_SIZE is too small (12700)! This is half a page!

Why? Who can I solve this problem?

Thanks Gerhard
