---

Running IDL4.01 on Power Macintosh. Would like to be able to write in a program to output a graphic to printer. I have a program that will do this for a Unix system. However, there is no Macintosh equivalent(?) to the lp or lpr command of Unix.

Thus, now I have to interactively do control-P or print from the menu to actually send the graphic to the printer. Is there a way I can do this automatically, without user input?

Thanks

Meir Shinnar
