Subject: Annotate Uncertainty [Upper & Lower] on a plot?
Posted by nvulic on Wed, 07 Mar 2012 21:55:56 GMT

Is there any way to annotate upper & lower confidence intervals to a plot neatly [i.e.-without using xyouts and approximating placement/ charsize]? I've looked at textoidl but you can't pass variables [my values change they are not set in stone] into there without changing a few things. Thanks!
