Hi all

I run a program with tmax=500 sec.

Now,I would like to make it start with tmin=40 and tmax=500sec [40,500]. Does anyone know how to do this?

With Thanks

Maria

This sounds like a question specific to some particular code you have written, rather than IDL in general? In which case, we would need to see the code to be able to give suggestions.
