Here's an unofficial fix for the SVN plugin in IDL 8.2.3:

ftp://download.exelisvis.com/groups/esg/dropoff/svn-plugin-f ix-IDL823.zip

This ZIP file holds two JAR files:

org.eclipse.team.svn.core_1.0.0.l20121228-1700.jar org.eclipse.team.svn.ui 1.0.0.l20130122-1700.jar

Unzip the file and, with the Workbench closed, drop these jars into:

(Linux) \$IDL_DIR/idlde/plugins (Windows) C:\Program Files\Exelis\IDL82\bin\bin.ARCH\plugins

and the appropriate plugins directory on a Mac. (I don't have a Mac handy at the moment.) Start the Workbench and the SVN plugin should work correctly. I've tested this on Linux and Windows.

Somewhere along the way the ball got dropped, and (naturally) I was out of the office this week. The official hotfix should be out shortly; i.e., when I get back to the office and start tracking down people.

mp

Thanks, this seems to work fine.

However, the bug I reported here is still not fixed: https://groups.google.com/forum/?fromgroups=#!searchin/comp. lang.idl-pvwave/svn/comp.lang.idl-pvwave/gN9LxwKZ50g/YjdtVMF FBGgJ

Anyways, it's already much better now!

You're welcome!

Yup, it's been scoped for 8.3. (It's IDL-68691, for reference.)

Also note (and you may have already seen this): another workaround is to close/reopen the project.
