
Subject: Problems rotating graphs?

Has anyone else had trouble rotating graphs in IDL 4.0 (4.0.1) for Windows (Win95)? When I plot something with `shade_surf` or `surface` with default rotation (30,30), everything's fine. But when I try to plot it rotated, the axes get messed up. They are placed in inconvenient places (like behind the data). Do I need to do something special so this won't happen? Any help would be appreciated. My e-mail address is below.
