
Subject: PLOT reference - overplot exceeds range

Hi there,

I have some issues with plotting:
When I overplot some data in an existing graphic window (target), using PLOT() and "OVERPLOT=target,/CURRENT", my data points exceed the initially created plot ranges. This happens even if I try "XRANGE=target.xrange" etc.
Any suggestions?

Thanks,
Hannah

If this is v8.2.3, then check the post in this newsgroup for links to the bug-fixed plot routines.
