Hi,

Is it possible to get a list and images of fonts that can be used in the
cgplot or the plot command in the idl session.

Something like cindex that gives the color and the associated index number.

Thanks in Advance

Gompie

Are you looking for something like the SHOWFONT command?

Cheers,

David

By the way, you can get a list of fonts like this:

```
IDL> DEVICE, GET_FONTNAMES=fnames, SET_FONT='*'
IDL> print, fnames
```

Cheers,

David

Thanks David,
I want to cherry pick from a list wherein I can see the name of the font along with the font itself, to help me select the font.
Something like the fonts selection in ms word.

I guess this would be useful for the 2-3 people who don't use Helvetica font. ;-)

Cheers,

David
