Hi guys,

I've just installed IDL, and coyote library on a mac, and i get this error

IDL> ps_start
% Keyword CMYK not allowed in call to: FSC_PSCONFIG::INIT
% Error occurred at: PSCONFIG   313 /usr/local/ssw/gen/idl_libs/astron/coyote/psconfig.pro
%   PS_START   283 /usr/local/ssw/gen/idl_libs/astron/coyote/ps_start.pro
% $MAIN$
% Execution halted at: PS_START   283 /usr/local/ssw/gen/idl_libs/astron/coyote/ps_start.pro

The installation on the /astron dir is not the default but a fresh coyote library.
On my linux distro i never had such a prolbem.
What might be the problem?

Thanks,
Petros

An IDL path problem in which an older version of FSC_PSCONFIG is getting
called, rather than the one you want. :-)

You are going to have to put the Coyote Library ahead of those (very)

old *other* Coyote Library routines to ever have a chance of getting
things to work. Here is how I solve these kinds of problems:

   http://www.idlcoyote.com/code_tips/fixcoyoteprogram.php

Cheers,

David

Thanks for your quick reply!
I had a conlfict with two fsc_psconfig__define.pro files fro another database!

Only two!? A small miracle. ;-)

Cheers,

David
