---

In IDL 8.3, scheduled for this fall, we will be updating our build support on Linux to RHEL 6. Minimum parameters are kernel 2.6.32 and glibc 2.12.

As a part of this update, we'll be discontinuing support for 32-bit Linux. IDL version 8.2.3 or earlier will continue to run on 32-bit Linux machines, but you won't be able to upgrade these machines to IDL 8.3.

My intent is to prepare you by announcing this change as early as possible.
