Subject: Emacs IDLWAVE
Posted by Seb on Thu, 29 Aug 2013 04:20:16 GMT

Hi,

As an Emacs user, I'm very glad to have found idlwave mode for editing
and interacting with the IDL shell (Emacs 24.3, idlwave 6.1), as I learn
IDL. However, the docs and my searches keep leading me to
www.idlwave.org, which has absolutely nothing to with this mode. I'm
using IDL 7.1, and it seems as if the help system is no longer
accessible from this idlwave version. Has development of this mode
stopped, or any tips on how to work around this?

Thanks,

--
Seb

You can find the repository for the IDLWAVE mode here:

   https://github.com/jdtsmith/idlwave

Cheers,

David
