Hello everyone,
       I am using cgbarplot for plotting 23 years data each bar represents a year so 23 bars should be named using barnames I am naming the 23 bars, but my problem is since barnames are years the numbers are getting overlapped and could not be visible. Is there a way to change the direction of display of the xtickvalues to vertical instead of horizontal. So that the barnames will be seen clearly without any overlap. Please do help me in this regard
thanking you in advance
sid

Have you considered a horizontal bar plot instead of a vertical one,
using the ROTATE keyword? :-)

There is no provision for this currently. However, a purchase of a
consulting contract in the Coyote Store has been known to produce
amazing results. :-)

Cheers,

David
