Hi folks,

a paper on today's astro-ph deals with biharmonic interpolation. Since I might give it a try, I searched for an IDL implementation. Indeed, there is one in J. Bailin's JBIU library but it seems difficult to get. The original JBIU website is taken over by an advertisement company, the EXELISVIS docs center just provides the description but no code, Bailin himself showed up here on March 1st after two years of silence, and has been quiet since then. I'd be grateful in case any of you brave IDLers can offer his/her private copy.

Regards, Bringfried

Does anyone know what's happened to this library?
