hello!

I am currently working to make this example (Google Map Plot)
work on my setup (Windows 8 SL, 64bit).

the coyote library is awesome, but ran into a small problem.

at first , i can't get the code to run as it always returns curl error 7.
however, i remember that the university had a proxy for the network, so i added these lines:

netObject = Obj_New('IDLnetURL')
   *netObject -> SetProperty,PROXY_HOSTNAME='proxy.name.goes.here'
   *netObject -> SetProperty,PROXY_PORT='8888'

and made it work.

hope this helps someone out their =)

Thanks, Marcus, I'll make a note in the code.

Cheers,

David
