Dear GDL users and contributors

We are very happy to inform you about the delivery of GDL 0.9.4,
which happen few weeks ago ! Some packages are already available :
<http://gnudatalanguage.sourceforge.net/>

As you can see into the NEW file
(<http://gnudatalanguage.cvs.sourceforge.net/viewvc/gnudatalanguage/gdl/NEWS>)
a lot of improvements has been done.
Two main points: quality of graphics outputs
and using Eigen3 lib for excellent performance on multi-cores.

Yes, it is better to use plplot 5.9.9 or 5.9.10 to have
some new features on plotting.

Don't hesitate to test this new version and report any trouble
onto the SourceForge tracker (the best way) or to me.
Please notice than we welcome code contributions but
we need they came with a license compatible with GNU GPL v2 or later.

with best regards

Alain for the GDL team

PS: the "configure" way:

```
tar -zxf gdl-0.9.4.tgz
cd gdl-0.9.4
mkdir m4 (no needed on most OS)
autoreconf -vfi
./configure [options] (e.g. syntax --without-python --with-hdf=no ...)
make -j N [N related to the number of cores you have, ~ the double]
[make check]
```

PS: the "CMake" way:

```
tar -zxf gdl-0.9.4.tgz
cd gdl-0.9.4
mkdir build
cd build
cmake .. [options] (e.g. syntax -DPYTHON=off -DHDF=off ...)
make -j N [N related to the number of cores you have, ~ the double]
[make check]
```
