Folks,

I have written a new article this morning on how to go about extracting a small study area from a large map projected image, using map coordinates to do the subsetting. Additionally, I demonstrate how to create an image mask from the study area coordinates. You can find the article here:

http://www.idlcoyote.com/map_tips/subimage.php

This work was supported by a donation to my web page. Donations have grown to \$325 for the month. I *greatly* appreciate the support.

Cheers,

David
