Hi,

quite disappointed that this bug is still not corrected in IDL 8.3:

https://groups.google.com/d/msg/comp.lang.idl-pvwave/gN9LxwK_Z50g/sdeKZpNj6SIJ

I have a bug description and a workaround.

I describe it again for the record and I will make a new support request at exelis (sigh...):

The bug is strange, and is reproducible on Windows and Linux.

1. Install SVN on a fresh IDL workbench
2. Checkout any project from SVN as a new project in the workspace (the coyote lib for example)
3. Right-click on the new project in the explorer: there is no IDL project properties tab! (this tab is useful because one has to check the box "update IDL path when project is opened or closed" for your project to be included automatically in your path)

Workaround is: open any file in the project, modify it and save it. Then the tab appears!!!

Fab

OK, the bug is not corrected and is listed as: IDL-68691 (I don't know where to find the page on exelis)

They're trying to find out if its IDL related or not.
