Folks,

Does anyone know how to add a TODO tag in a file, using the IDL Workbench?

Cheers,

David

Yep, use it all the time:

```
idl_code
```

```
;todo some witty comment to remind what I'm doing
```

```
more_idl_code ;todo another witty comment
```

Then, you can use the Tasks view to see them all. You can use different tags too. See Preferences->Editor

Whoops. That's Preferences->IDL->Editor

Oh, I was making that way too hard! Didn't know there *was* a Task view.  
That's useful, too. Thanks!

David
