Hi:

I want to pass a struct point which is in another struct,from C to IDL by DLM.

like this:

```
struct AcDb2Dpoly{
  IDL_STRING d2poly_id;
  double d2poly_thickness;
  IDL_VPTR d2poly_vertices;
  IDL_LONG polyType;
};
```

d2poly_vertices is want to pass another sturct in c.

for example:

```
typedef struct {
  IDL_STRING id;
  IDL_STRING NAME;
  UCHAR BlockColor[3];
  double PTO[3];
}AcDbBlock;
```

AcDbBlock is the content I want to pass by d2poly_vertices.

the problem is how to write the code in c? using IDL_MakeTempArray() to add the struct to the d2poly_vertices?

or the problem is how to put the AcDbBlock into a IDL_VPTR?

can anybody help me? thanks very much.

Thanks.
