Subject: Coyote On-Line Training
Posted by David Fanning on Sat, 08 Mar 2014 18:06:58 GMT

Folks,

I have been experimenting lately with using Cisco WebEx Meetings to conduct small one-on-one training sessions with interested IDL users. This is going quite well, and I would like to see if it is possible to expand To this end, I am running an experiment in which I will hold a one hour demo/training/conversation with interested IDL users in how to install and use the Coyote Graphics System in IDL. This will be held on Thursday, March 13th, at 9:30 AM, Mountain Daylight Time (Denver, Colorado, USA time). This session is completely free.

The way this works is that WebEx will install a plug-in on your browser that will allow us to communicate with one another. I am told this plug-in will not interfere with firewalls, etc. (One of the things I am hoping this experiment tests, obviously.) WebEx does require a recent browser and has a few other requirements. You can learn what they are here:

  http://bit.ly/1h1sPTb

The session is aimed primarily at people who would like some help installing the Coyote Library and using the Library most efficiently. The session will be interactive, so participants will be free to ask specific questions. I will try to answer these questions in real time. In this respect, it will be like taking an IDL class from me. You will be able to see what I am typing as I type. My plan is to record this session so it can be viewed by everyone in the future.

If you or someone you know is interested, please contact me. I will add the e-mail address to my list and make sure you get an invitation to the meeting. I presume everyone will be able to find my e-mail address. :-)

Cheers,

David

Humm. Something got lost in translation from the Coyote language here.
This paragraph should read like this:

I have been experimenting lately with using Cisco WebEx Meetings to
conduct small one-on-one training sessions with interested IDL users.
This is going quite well, and I would like to see if it is possible to
expand this to more participants simultaneously.

To this end, I am running an experiment in which I will hold a
one hour demo/training/conversation with interested IDL users in how to
install and use the Coyote Graphics System in IDL. This will be held on
Thursday, March 13th, at 9:30 AM, Mountain Daylight Time (Denver,
Colorado, USA time). This session is completely free.

Sorry about that!

David
