I'm a green hand on IDL. Struggling with a Read_BMP problem.(IDL6.2,WIN7)

IDL> A=READ_BMP('XRD.bmp', R, G, B)

Array dimensions must be greater than 0.

Error occurred at: READ_BMP 122 C:\Program Files (x86)\IDL\IDL62\lib\read_bmp.pro
\$MAIN\$

Execution halted at: \$MAIN\$

Anyone can help? Appreciate!

According to the documentation (http://www.exelisvis.com/docs/read_BMP.html), READ_BMP does not handle 1-bit-images or compressed images. You can examine the file with QUERY_BMP before you try to read it and find out if it is one that READ_BMP likes.

Subject: Re: Error with read_bmp

before you try to read it and find out if it is one that READ_BMP likes.

Thank you, Mats

I got another question here. When I use the read_jpeg or read_bmp function to read the picture, all information is saved in the variable. But when I try to use TV,variable to display again, it shows me a black screen

```
IDL> read_jpeg, '1.jpg',a  
IDL> tv,a
```

Try this:

```
IDL> tv, bytscl(a)
```

But, you need a much smarter TV command. :-)

<http://www.idlcoyote.com/idldoc/cg/cgimage.html>

Cheers,

David

Thank you so much Dr. Fanning!
