
Subject: Function syntax for any object class

I just noticed that I am able to create an object without the use of Obj_New(). As a simple example,

```
IDL> help, idl_container()
```

```
<Expression>  OBJREF  = <ObjHeapVar558(IDL_CONTAINER)>
```

Has anyone seen this documented anywhere? I assume it is a general effect of the new function graphics; however, I was surprised when I tried to call a function of mine and got an object back.

Oh, nevermind. I found it. Had never tried this before.
