Subject: Locking is not possible in the directory issue
Posted by biophys on Thu, 03 Apr 2014 20:04:08 GMT

Hi, folks

I am having this issue when firing up idl in an environment where all users' home folders are on a remote NFS share. I have tried to use "-Dosgi.locking=none" and "-Dosgi.configuration.area=/my/local/idl/home" but with no success. idl is still trying to lock the ~.idl/idlworkbench-config-idl8.3.0_x86_64/org/eclipse.osgi folder. Is there a way to assign a different folder on local harddrive as the .idl folder? Thanks for your help!
