
Subject: Help with DLL .def files?

Could someone please explain .def files to me? I'm trying to write a DLL for use with IDL, and I'm using Watcom C to build my DLL. I have a .def file (like in the example that came with IDL), but I'm not sure what to do with it. Do I use it as source to my project and build the DLL with it? If so, how? Watcom didn't like that. Or do I just put it in a certain directory to be referenced? I just don't know. IDL won't recognize my DLL functions without the .def file (I think). Please help me if you can. Thanks.
