Subject: writing different file to a single file
Posted by abc on Thu, 24 Jul 2014 23:26:55 GMT

Dear Friends,
          I have three spectra in three different file (spec1.txt, spec2.txt and spec3.txt). They ranges from 100-200A, 200-300A and 300-400A. Does anybody knows how I can write them in a single file in a right order.

thanks in advance

Are you just concatenating the files? You don't need IDL, you just need the basic linux/unix command:

cat spec1.txt spec2.txt spec3.txt > specall.txt
