
Subject: error with struct expression

Hi

I have a function and I return the following as a structure.

```
RETURN, {A:A, $  
        B:B, $  
        C:C}
```

When I want to return just one RETURN, {A:A} I got the following error "Struct expression not allowed in this context: <STRUCT Array[1]>."

Does anyone came across with something like this before?

With thanks

Can you show us a minimal example that gives that error message?

Because this appears to work:

stru.pro:

```
----  
function test, X  
  A = X  
  RETURN, {A:A}  
end
```

help, test(15)

```
end  
----
```

```
IDL> .rn stru  
% Compiled module: TEST.  
% Compiled module: $MAIN$.  
** Structure <cf57b8>, 1 tags, length=2, data length=2, refs=1:  
  A          INT          15
```
