
Subject: repeating elements of an array

Hi guys

First I want to arrange two values (-50 and 40) in the range of 10, so that I get the following array:

a = [-50 -40 -30 -20 -10 0 10 20 30 40]

Now, I want to repeat each element of array 5 times so that I can get the following result:

ans1 = [-50 -50 -50 -50 -50 -40 -4040]

I also want to repeat the whole array 5 times to get the following result:

ans2 = [-50 -40 -30 -20 -10 0 10 20 30 40 -50 -40 -30 -20 -10 0 10 20 30 40 -50 -40 -30 -20 -10 0 10 20 30 40 -50 -40 -30 -20 -10 0 10 20 30 40]

How can I do it? I hope someone can help me.

cleo

```

It sounds like I might be doing your homework, but ...

```
a = [-50:40:10]
```

```
ncopies = 5  
nelements = n_elements(a)  
npts = ncopies*nelements
```

```
ans1 = rebin(a, npts, /sample)
```

```
; build up answer by concatenation  
ans2 = []  
for i = 1, ncopies do ans2 =[ans2, a]
```

```
; or else build up answer by copying  
ans2 = intarr(npts)  
for i = 0, npts-1, nelements do ans2[i] = a
```

TTFN,

David

First, the original array:

```
IDL> a = findgen(10)*10-50
```

Now, repeat each element of the array:

```
IDL> aRepeat= rebin(a, 50, /sample)
```

Replicating the array is a little more involved, but still pretty straightforward:

```
IDL> aReplicate = reform(a#replicate(1., 5), 50)
```

Fun with reform and rebin!
