I have three questions regarding ENVI and IDL. The first question is I'm trying to

Export to IDL Variables but when I get to the name I entered any name so when I go to IDL I can find it. Where and how to find the export file.

The second question is how to edit the ENVI data for one pixel? As I understood I have to export them to IDL variables then I will be able to make changes.

The third question is I have compressed stock matrix file which is big about 14404 *3300 line and column how can I make it like 1000 *1000 to work on it because I do not need all the image
