Subject: Drawing lines in ENVI LiDAR with IDL
Posted by Alexander Shenkin on Wed, 03 Dec 2014 12:01:29 GMT

Hello all,

I need to draw some lines in an ENVI LiDAR point cloud, given starting
and ending coordinates. This is for data exploration.

I'm new to IDL and ENVI (though I have plenty of experience with other
programming environments). I've been reading up on the basics of IDL,
and learning the basics of ENVI.

I was hoping that someone might be kind enough to point me in the right
direction. How might I go about interacting with a point-cloud display
in ENVI LiDAR?

Thanks in advance!
