Hi all,

I just found, that one of my old programs which used a call_external to a fortran subprogram doesn't work anymore with IDL 4.0. (under AIX3.2.5) I get the error message, that it can't find my library -- although its definitely in the current directory. I also cannot get the example to work, which comes with the 4.0 distribution.
It worked fine upto 3.6.

Thanks for help, Ralf
