Hello to all!

I'm using a code: (http://www.exelisvis.com/Support/Forums/tabid/184/forumid/6/
threadid/12017/scope/posts/Default.aspx) to batch subset multiple images using a single envi
vector file (evf) and I'm quite successful on this.

However, I realized that I also have 81 evfs and it's very tiring to do it 81 times.

Are there any codes out there that uses multiple evfs to also subset multiple images?

Thank you!
