Hi Folks

I have 143 polygons in 143 different locations. Under each location I have 8 different images. The issue is, how I can subset those in one go?

Or I have 143 polygons very far from each other, each one covered by 8 images, and then 143 polygons * 8 images (then 1144 images to subset).

I should appreciate if I could get some code to run in ENVI.

Many thanks

Abu
