Folks,

Hi,

I am trying to plot from a ssh and i could not get the graph like this:

IDL> plot, indgen(100)

% PLOT: Unable to connect to X Windows display: :0.0

% PLOT: Unable to open X Windows display.

Is your DISPLAY environment variable set correctly?

% Execution halted at: \$MAIN\$

IDL> plot, findgen(100)

% PLOT: Unable to connect to X Windows display: :0.0

% PLOT: Unable to open X Windows display.

Is your DISPLAY environment variable set correctly?

% Execution halted at: \$MAIN\$

IDL>

for sure i have X Windows display...

Can some please help?

Thanks

Cheers,

Dave

P.S. i am with ubuntu 12.4

Try ssh -X or ssh -Y (and man ssh :-)

regards,  
Lajos

Thanks. ssh -Y is the trick :)

Cheers,  
Dave
