Subject: IMSL won't load
Posted by Jeremy Bailin on Thu, 19 Mar 2015 19:43:59 GMT

Hi everyone,

I recently added the Analyst license to give me access to the IMSL routines. However, when I try to use them I get this error:

% MATHSTAT_135: Dynamically loadable module is unavailable on this platform:
       IMSL.

The license server does seem to see the license -- at least, I see this when I use lmstat:

Users of idl_analyst: (Total of 1 license issued; Total of 0 licenses in use)

Any ideas?

-Jeremy.

What is your platform? IMSL is not available on OS X and Intel Solaris (see the IDL Feature Support table in the docs).

regards,
Lajos

Yes, it's OS X. Thanks.

-Jeremy.

Hey Jeremy,
Just out of curiosity, which IMSL routines were you interested in using? We're always looking to enhance core IDL functionality...
-Chris

In this case, IMSL_ERF with the /INVERSE keyword, though I've certainly run into times before
when I've wanted to use other IMSL routines (I don't remember which off-hand), which is why I got
the Analyst license.

-Jeremy.
