Subject: Combine few eps files in one eps with high resolution

Hello,

I have 9 eps files. I want to place them 3x3 order. I used CDO from ImageMagic but it reduces the resolution. Can anyone help me the way how can I place them that will cover the whole A4 page nicely? I also want the resolution to be of very high quality.

Any help is highly appreciated.

Sorry, IDL doesn't manipulate postscript files.

This is beyond the scope of IDL, try Adobe Illustrator or CorelDRAW instead.

Maybe "psnup" from psutils, available at least on most *nix systems.
