IDL Gurus,

I'm trying write a remote procedure call. To do this the program (helloworld.c) needs to find $IDL_DIR/external/examples/rpc/rpcidl.a. Unfortunatly, this library is not exist - it's only a symlink to nothing. In the IDL guide (v4.0; Chpt 24; Remote Procedure Calls) rpcidl.a is specified in the helloworld.c program. Does anybody know why this library doesn't exist? BTW, it's missing on DEC OSF/1 and SGI. Any help is greatly appreciated.

Thanks,
Steve Mc

Make a bi-level image with your threshold, then use Label_Region to select your pixel groups. You can screen them for size as you process them, discarding any that are less than your minimum. Here is an article that describes the process:

http://www.idlcoyote.com/ip_tips/blobanalysis.html

Cheers,

David

Thank you for the reply. The blob_analyzer is the code is the one that suits my requirement.
Thank you once again.
