Hi:

I am coming across the following error when initializing a named structure.
Any help in this regard is greatly appreciated.

eg:

```
; named structure creation
name1 = { file, name:' ', header_size:0, data_type:0, format:0, $
    dim:intarr(3), key:' ' }
```

```
; case I ( valid )
name1.dim = [ 10, 20 ] ; initialized name1.dim() to [ 10, 20, 0 ]
```

```
; case II ( results in error )
name2 = { file, name:' ', header_size:0, data_type:0, format:0, $
    dim:[10,20], key:' ' }
; results in an error since the member 'dim' expects intarr(3)
*****
```

Can anyone help me in making named structures as in case II ?

Thanks in advance.
