Subject: error bar linestyles in cgplot

Is there a way to control the linestyles of error bars using cgplot? When I set linestyle in cgplot it only controls the data line, which is reasonable but I'd also like a mechanism for controlling the linestyle of the error bars. I can always revert to older error bar plotting techniques but I'd like to stay with the coyote graphics system if possible.

Thanks!

Bryna

I think that the fastest way would be to add your own ERR\_LINestyle keyword to the code of cgPlot, following the model of the ERR\_WIDTH keyword.

Cheers,

Fabien
