Hi,

anyone know of a quick and easy way around this bug?

```
i = image(dist(512), 10d * dindgen(512)/511d, 10d * dindgen(512)/511d)
p = polygon([3,7,7,3],[3,3,7,7], /current, /data, Fill_background=0)
p.select
p.setData, [3,6,6,3], [3,3,6,6]
```

IDL> !version

```
{
  "ARCH": "x86_64",
  "OS": "Win32",
  "OS_FAMILY": "Windows",
  "OS_NAME": "Microsoft Windows",
  "RELEASE": "8.4.1",
  "BUILD_DATE": "Feb 17 2015",
  "MEMORY_BITS": 64,
  "FILE_OFFSET_BITS": 64
}
```

Thanks,
Helder

```

Yep. In idlitzispolygon__define.pro, around line 1516, add a call to "self->UpdateSelectionVisual".
The code should look like:

```
self->UpdateSelectionVisual
oTool = self->GetTool()
if (ISA(oTool)) then oTool->RefreshCurrentWindow
```

Cheers,
Chris

p.s. this has now been fixed for the next version (post IDL 8.5...)

Thanks Chris, really appreciated.

Helder

```

Just a minor remark. In IDL 8.4.1 the line at which this takes place is around 1464, not 1516. Simply search for "self->GetTool()" because there is only one occurrence of this in the file.

Helder
