Subject: mysqlquery to insert data into MySQL

Using Marc Buie's IDL library, I can use 'mysqlquery' to retrieve data from MySQL, with syntax of:

mysqlquery, lun, 'SELECT Col1, Col2 FROM Table1;', v1, v2, format = '(A,A)';

However, I don't know the syntax to insert data using mysqlquery. How do I pass the data into the query string?

Anyone can help? Many thanks!

Regards,

I have this function to crate a MySQL table from an IDL structure. It may be what you want:

 http://ppenteado.net/idl/pp_lib/doc/pp_structtomysql.html#pp _structtomysql

The inverse operation (MySQL table into an IDL structure array) is done by

http://ppenteado.net/idl/pp_lib/doc/pp_mysqlquery.html

Thank you Paulo for your reply. It is similar to the function I request but slightly different. I may

need to work on the source code to make my function. Thanks much.
