
Subject: multiple barplots on histogram

Dear all,

I'm trying to make 6 different histograms on 1 postscript file. Where my yrange = [0:30] and xrange = [0:8] while binsize = 0.25, but each of my datavalues are different, (x1 = b[0:45], x2 = b[0:43], x3= b[0,34]....). Essentially I was hoping for it to look like the last figure of David's https://www.idlcoyote.com/cg_tips/barplot.php where class is x is 1 through 6, Exp is 0 through 8 by bins of 0.25.

Is there a way for this to be done or a different way that would be better, I just need each of the different datavalues to show up and not be covered if I overplot them.

Thanks,

Chase
