
Subject: IDLgrImage used with NO_COPY

I see that with IDLgrImage, you can use /NO_COPY to speed up data transfer and save memory.
Like this

```
o = IDLgrImage()  
o.SetProperty, DATA=img, /NO_COPY
```

So, my question is, why doesn't GetProperty have a NO_COPY keyword for data transfer also?
When you GetProperty the DATA, it makes a copy.
