Subject: disable content assist?
Posted by floresaa on Tue, 23 Feb 2016 21:44:02 GMT

Hi everyone,

Long story short: my dev environment becomes unresponsive when content assist attempts to bring up a list of a particular object's methods/elements. Does anyone know a way to completely disable automatic content assist? It looks like eclipse generally has options to disable this behavior but I don't see them in the IDL version.
