
Subject: IDL wish list (continued)

In the great Age of the Web (catch it quick, it may be over next year), it seems odd a package with all the graphics format capabilities and animation functionality of IDL doesn't have:

1. /INTERLEAVED and /TRANSPARENT = color keywords for WRITE_GIF,
2. WRITE_QUICKTIME (with a /FLATTENED keyword for making flattened movies on Macs could then be used on other systems), and
3. WRITE_MPEG

Maybe WRITE_JAVA_SCRIPT could then follow....

Thinking wishfully,

Joe Gurman

P.S. We currently generate ~ 10 Mbyte of material for the Web using IDL on different platforms every day.
