Dear friends,

Does anyone know a practical way to read, manipulate, and extract elements from a file in JSON format using IDL?.

I would like to manipulate the elements similarly as it is done with conventional arrays.

Any feedback is very welcome.

All the best,
Roberto.

JSON_PARSE was added in IDL 8.2. The only issue for you is to read your file into a string, then pass that to JSON_PARSE. Checkout the TOARRAY to get standard IDL arrays.

Mike
