Subject: Scrollwindow WSET problem
Posted by altamidl on Thu, 28 Jul 2016 13:17:56 GMT

I'm a beginner using IDL 8.5.1. I'm trying to use
https://www.idlcoyote.com/programs/scrollwindow.pro

I have the following portion of code:

```
ScrollWindow, XSIZE=actualX, YSIZE=actualY, wid = w1
TVSCL, fullImage, TRUE=3

ScrollWindow, 2, XSIZE=factor*actualX, YSIZE=factor*actualY, wid = w2
WSET, 2 & TVSCL, rebinIm, TRUE=3

ScrollWindow, 3, XSIZE=factor*actualX, YSIZE=factor*actualY, wid = w3
WSET, 3 & TVSCL, rebinIm, TRUE=3
```

I'm trying to make it open three separate windows. I didn't have any problems when using the built-in WINDOW code, but broke something when trying to transition to ScrollWindow. Whenever I run it, it tells me:

WSET: Window is closed and unavailable.

Any help would be greatly appreciated.
