hello,

I am using plot_image xaxis is shown as pixels but in order to change to arcsec how do we give the values in xaxis instead of the pixel values.

pls help me in this regard.

thanks

try one of these:

plot_image, image, scale=[xscale,yscale]
plot_image, image, scale=[xscale,yscale], /nosquare

I assume you are plotting the image from a fits file with a header. The header contains the keyword CDELT1 and CDELT2 these are the scales to be used along X and Y respectively. you can do something like this

plot_image,image,scale=[index.cdel1,index.cdel2]
