Hello,

I am currently working on a code that requires reading all 7 bands in all of my HDF files. HDF_browser allows to select the needed bands, however i can only choose one band using this hdf_browser. How can I select all 7 bands?

Print, 'Reading reflectance file...

```
;If hdf_file not equal to 0 then create open the MODIS infile and get other info
if hdf_file ne '0' then begin
  tmpltexists=file_test('modis_nbar_read_template.sav')
  if tmpltexists eq 0 then begin
    print, 'Select every MODIS NBAR band...
    tmplt=hdf_browser(hdf_file)
    save, tmplt, filename='modis_nbar_read_template.sav'
  endif else begin
    restore, 'modis_nbar_read_template.sav'
  endelse
```
