How do I create a 12 year time series for a large dataset of 7200 bil files? I have about 600 BIL files for each year from 2000 to 2012.

year 2000= 600 bil files
year 2001= 600 files
and so on year 2012= 600 files..

This is how I would usually create my time-series:

```
year = indgen(12)+2000  
outarr = transpose([[year], [outarr]])
```

Since I have multiple files for each year, what is the best way to create a time series?

Thank you.

```
year=([2000.:2013.:1./600.])[0:-2]
```
